

ReVogue Cloth Rental App

UI/UX Case Study

Project Overview

“Revogue” is a one-stop solution for renting, swapping, and selling pre-loved fashion items. The app aims to make sustainable fashion accessible by making it cost-effective and stylish for users. The outcome is a platform that not only reduces fashion waste but also creates a community-driven, affordable, and eco-conscious alternative to fast fashion.

Design Thinking Framework

Stakeholder Questions

What problem are we solving with this product?

Reducing high fashion waste, making the process of renting and swapping fashion items easier, while ensuring safety and authenticity.

Who are the target users?

Gen Z, Millennials – budget-conscious, fashion-forward & eco-conscious shoppers

What business goals does this app aim to achieve?

- Build a reliable platform for pre-loved fashion.
- Encourage circular fashion to reduce waste.
- The revenue model charges a small fee per clothing item based on rental duration, swap facilitation, or sale commission, ensuring affordability for college students while keeping the platform sustainable.
- Position the brand as a sustainable alternative.

What features are critical for the MVP? (Minimum viable product)

- Simplest version of the product that only includes core features.
- User profile, cart – digital closets
- Listing items for rent/ swap/ sell
- Secure payment gateway
- Authenticity check feature
- Styling recommendations (Experts and AI-based)
- Ratings and reviews

Market Research

DIRECT COMPETITORS–

Our direct competitors offer similar products or services, targeting the same audience in the market.

Flyrobe, DateTheRamp, Stage3, Kuro India, Rent it bae, CandidKnots

INDIRECT COMPETITORS–

These competitors may provide alternative solutions to customer needs but are not in the same product category.

Myntra, OLX, Amazon, physical rental shops, and Instagram thrift pages.

Competitive Analysis

	FLYROBE	KURO INDIA	MYNTRA	PHYSICAL/INSTA THRIFT STORES
STRENGTHS	• Well-known as an early mover. • Decent social media presence, some customer awareness. • Premium designer collection (bridal + party wear)	• Niche in bridal and event wear rentals • Premium-looking catalog	• Massive customer base and trust • Good quality • Strong delivery • Huge brand variety	• Local access – customers can see/try clothes in person • Instagram thrift shops are trendy & give a “unique finds” vibe.
WEAKNESSES	• High pricing (close to buying range) • Limited western wear options • Lack of visible customer reviews – trust issues • Poor logistics outside Tier-1 cities • Outdated and a lack in variety of options	• Limited categories • Expensive • Low customer transparency (no reviews etc.)	• Only selling, no renting or swapping feature • The pricing range is wide, but still expensive for fast-changing fashion • Slow loading time	• Expensive • Delivery is delayed or inconsistent • No standardized return/refund policy • Trust issues • Usually limited to wedding collection
UI	• Cluttered categories • No personalization	• Visually better than Flyrobe, still clunky • Filters not intuitive	• Modern, clean • Personalized recommendations	• Usually Instagram DMs – no structured app/website • Poor cataloging
UX	• Confusing flow from product selection to checkout • Delivery timelines unclear • No flexibility in rental duration	• Designed more for browsing, not smooth or fast checkout • Trust gap due to lack of social proof • Few delivery options beyond metro cities	• Strong review system and return policy • Checkout flow smooth • Missing renting option – doesn’t address affordability + sustainability	• Manual negotiation + payments • No convenience compared to app-based renting • Risk of scams

SWOT Analysis

STRENGTH

- **Sustainability-focused USP:** Strong fit with rising demand for eco-conscious and sustainable fashion.
- **Community-driven model:** Builds trust and loyalty through a peer-to-peer fashion exchange.
- **Cost effectiveness:** Provides quality and affordable access to luxury fashion compared to the retail market.
- **All-in-one platform:** Combines renting, swapping, and resale in one convenient platform.

WEAKNESS

- **Operational complexity:** Managing logistics for rental returns, cleaning, and swaps is resource-intensive.
- **User contributions:** Relying on a consistent supply of quality items.
- **Revenue model clarity:** Balancing between rental fees, commission on sales, and swap credits needs optimization.

OPPORTUNITIES

- **Rising eco-consciousness:** Growing concern over climate change and fashion waste boosts adoption.
- **Brand collaborations:** Partner with sustainable brands, influencers, and eco-activists to grow visibility
- **Integration with AI:** Improving personalized recommendations, virtual try-ons, and style matching with AI.
- **Market expansion:** Opportunities in urban India, Europe, and North America, where resale/ rental is trending.

THREATS

- **Competition:** Already established competing players in the market
- **Fraud concerns:** Risk of counterfeit items or dishonest sellers will harm credibility.
- **Hygiene perceptions:** Even with cleaning protocols, some users may feel uncomfortable using pre-loved items.
- **Consumer mindset shift:** Change in customer preferences may affect demand.

User Research

In the user research phase, we utilized surveys to gather valuable insights from potential users. This approach allowed us to collect diverse perspectives on their preferences and pain points. Analyzing the survey results helps inform design decisions, ensuring that the application meets user needs effectively.

Question types – Multiple choice, short answer, etc

Questions asked – 18

User responses – 40+

Age group?

How often do you buy clothes?

Do you think buying clothes has become expensive?

Have you rented clothes before?

What matters when renting clothes?

What would be your biggest concern while renting clothes?

Persona

Kanishk is a fresher at NIT Rourkela. Being new to the college, he needs clothes for various occasions like fests, parties, and formal events. He wants affordable rental options, stylish outfits, and reliable services so that he can save pocket money and not be overcharged by rental providers.

Name: Kanishk

Age: 17

Profession: Student

Location: NIT Rourkela

NEEDS-

- To easily find clothes for renting
- To know more details about the product
- To rent clothes for affordable prices
- Pricing to be based on the accurate condition of the product.

GOALS-

- To buy second hand clothes more easily
- To save pocket money
- To have a wide variety of choices
- To afford trendy and stylish clothing under budget.

PAIN POINTS-

- Difficulty in finding a renter for clothes both offline and online
- Unsure about the authenticity of the product
- Difficulty in finding the correct size and fit
- Difficulty in finding clothes that matches his taste.

Empathy Mapping

SAYS

- It's great if I can rent clothes at a low price.
- I want to know the exact size, fit, and condition of the outfit.
- The outfit looked different in pictures.
- I was worried about whether the dress will arrive on time.

THINKS

- I am confused about where to find reliable rental services.
- I want to pay according to the quality and condition of the outfit.
- I want to save money instead of buying new clothes.
- What if the outfit doesn't fit me properly.

DOES

- Randomly browses online stores and rental platforms.
- Ends up buying a new outfit when rental options don't work out.
- Asks friends or family for recommendations.
- Spends extra time comparing rental prices vs. buying.

FEELS

- Confused: doesn't know which rental provider to trust.
- Uncertain: about outfit condition, hygiene, and fit.
- Scared: of not receiving clothes on time before an event.
- Worried: about overspending when rentals fail.

Problem Statement

Fast fashion drives waste and high costs, while unused clothes pile up in wardrobes. Consumers lack a secure, trusted way to rent, swap, or sell pre-loved fashion with authenticity checks and styling help. A sustainable marketplace app can solve this by extending clothing lifecycles and offering affordable, eco-friendly choices.

Outcome:

Create a marketplace app for renting, swapping, or selling pre-loved fashion items. Include features for secure transactions, product authenticity checks, and styling recommendations.

Promote sustainable fashion by extending the lifecycle of clothing and accessories while offering cost-effective options for users.

How Might We

1. How might we design a simple and intuitive interface for renting, swapping and selling clothes?

- Design idea – Minimal, clean UI
 - Interactive onboarding
 - Calendar to show renting/swapping duration
 - AI-powered search & filters
 - Instant checkout + UPI integration
 - Offline browsing mode – saves last seen products

2. How might we expand beyond just event wear and bring trendy western and casual fashion into the renting ecosystem?

- Design idea – Separate sections – “Casual wear” & “Event wear”
 - Create style guides curated for different occasions
 - Partner with local thrift sellers, boutiques, and brands

3. How might we make fashion renting/swapping more affordable and flexible?

- Design idea – “Calendar” feature to make the renting duration flexible
 - Dynamic pricing model – higher for 10 days, lower for 2 days
 - Subscription option – premium features
 - Swap-only feature – no money, just exchange verified items

4. How might we build trust and transparency into this process?

- Design idea – Verified sellers & renters with ID checks
 - Rating, review, and comments system
 - Refundable security to prevent misuse
 - AI-based quality checks – hygiene checks and transparency
 - Gamify reviews – users earn points after each review

5. How might we create a clear & flexible return/rental experience?

- Design idea – Rental duration flexibility
 - Clear damage policy – security cut except for minor wear
 - Doorstep pickup & delivery

Key Takeaways

- This being our first UI and UX project, we got to learn everything from the basics it.
- Everything, from planning the process to actually doing everything on our own, learning how to do it, planning along the way: all of it is something that we got to do for the first time through this project.
- We've learned to empathize with users and will try to do it better next time onwards.
- We'll work on our story-telling abilities better, because we feel they make going through a case study even better.
- We'll make sure that we test our solutions, that we were not able to do in this project.

Thank You
